

**Your benefits:**

- Pure active ingredient concentrate
- Without additives and VOC – therefore sustainable and high-yielding
- Sensational cleaning power
- Powerful and hygienic
- Bright colors
- Long-lasting antistatic effect
- Garments soft and pliable
- Fresh scent
- Less distillation residue
- Improved energy utilization

Active ingredient concentrate with sensational cleaning power!  
For application in hydrocarbon or perc.

30% less drycleaning detergent costs  
40% less disposal costs  
50% less drycleaning detergent consumption

Competent and efficient  
in textile chemistry and hygiene

# Increasing performance, satisfying customers needs, reducing energy and disposal expenditure – Amazing benefits!

## CLIP

### – the brand name of drycleaning detergents from Kreussler

With each new CLIP brand we strive to fulfil the needs of our customers. Our experienced technicians work alongside drycleaners to assist with problems that are universal to the industry. Their feedback results in the use of the best and latest technology to solve these challenges.

### This standard applies to CLIP GREEN CONC!

With CLIP GREEN CONC our in-house R&D department has been able to optimize an entirely new surfactant combination to meet the demands of processing in hydrocarbon and perc solvents. This development ensures a successful and unequalled cleaning result in either solvent.

CLIP GREEN CONC is a super-concentrated drycleaning detergent formulation comprised of 100% active ingredients!

## GREEN

### – absolutely hygienically clean

No other drycleaning detergent can bind as much water as CLIP GREEN CONC. This synergy of water and detergent effortlessly removes water soluble dirt like food and drink residue. Productivity is increased and your customers will receive cleaner fresher garments.

Even salty protein dirt like sweat present no problems for CLIP GREEN CONC.

Hygienic and odour free results are ensured, even on the most difficult garments. CLIP GREEN CONC will improve the resistance to shrinking and felting on sensitive fabrics like wool and silk.

## CONC

### – Power by active ingredient

Therefore, 2.65 gal of CLIP GREEN CONC have more power than 6.35 gal of conventional products.

### ONLY 1/2 once per 10 lbs textile – Remarkably good!

This extraordinary low dosage results in a yield more than double many 'older' detergent formulations. This saves packaging, freight, and storage capacity. In the current changing economic market, controlling your costs is a necessity, not a choice.

### Increasing productivity And lowering costs – isn't that what we all want?

The highly substantive fiber protecting ingredients in CLIP GREEN CONC remain on the fabric. You can expect easier finishing, outstanding anti static characteristics resulting in minimal or no lint rolling and excellent wear comfort and appearance of the drycleaned textiles. Distillation residue and disposal costs will be decreased by up to 40%. Further solvent loss will be reduced and the energy efficiency improved. Cost savings on processing and satisfied customers will improve your bottom line.
